

# 50 Linux Commands List with Examples

The Linux command is a utility of the Linux operating system. All basic and advanced tasks can be done by executing commands. The commands are executed on the **Linux terminal**. The terminal is a command-line interface to interact with the system, which is similar to the command prompt in the Windows OS. *Commands in Linux are case-sensitive.*

Linux provides a powerful command-line interface compared to other operating systems such as Windows and MacOS. We can do basic work and advanced work through its terminal. We can do some basic tasks such as creating a file, deleting a file, moving a file, and more. In addition, we can also perform advanced tasks such as administrative tasks (including package installation, user management), networking tasks (ssh connection), security tasks, and many more.

Linux terminal is a user-friendly terminal as it provides various support options. To open the Linux terminal, press "**CTRL + ALT + T**" keys together, and execute a command by pressing the '**ENTER**' key.

In this topic, we will discuss the top 50 most frequently used Linux commands with their examples. These commands are very useful for a beginner and professional both. We have divided these commands into following sections so that you can easily identify their usage:

- [Linux Directory Commands](#)
- [Linux File Commands](#)
- [Linux File Content Commands](#)
- [Linux User Commands](#)

- [Linux Filter Commands](#)
- [Linux Utility Commands](#)
- [Linux Networking Command](#)

## Linux Top 50 Commands

The following are the top 50 Linux commands:

### Linux Directory Commands

#### 1. pwd Command

The `pwd` command is used to display the location of the current working directory.

##### Syntax:

```
pwd
```

##### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ pwd
/home/javatpoint
```

#### 2. mkdir Command

The `mkdir` command is used to create a new directory under any directory.

##### Syntax:

```
mkdir <directory name>
```

##### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ mkdir new_directory
javatpoint@javatpoint-Inspiron-3542:~$
```

#### 3. rmdir Command

The `rmdir` command is used to delete a directory.

##### Syntax:

```
rmdir <directory name>
```

**Output:**

```
javatpoint@javatpoint-Inspiron-3542:~$ rmdir new_directory
javatpoint@javatpoint-Inspiron-3542:~$
```

## 4. ls Command

The **ls** command is used to display a list of content of a directory.

**Syntax:**

```
ls
```

**Output:**

```
javatpoint@javatpoint-Inspiron-3542:~$ ls
a           Desktop      examples.desktop  Music        sample
Akash       Directory    hello.c          pico         snap
a.out       Documents   hello.i          Pictures     Templates
composer.phar Downloads   hello.o          project     Test.txt
Demo.sh     eclipse     hello.s          Public      Videos
Demo.txt    eclipse-installer index.html       Python
Demo.txt~   eclipse-workspace mail             Python-3.8.0
```

## 5. cd Command

The **cd** command is used to change the current directory.

**Syntax:**

```
cd <directory name>
```

**Output:**

```
javatpoint@javatpoint-Inspiron-3542:~$ cd Desktop
javatpoint@javatpoint-Inspiron-3542:~/Desktop$
```

# Linux File commands

## 6. touch Command

The **touch** command is used to create empty files. We can create multiple empty files by executing it once.

**Syntax:**

```
touch <file name>
```

touch <file1> <file2> ....

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~/Newfolder$ touch Demo.txt
javatpoint@javatpoint-Inspiron-3542:~/Newfolder$ touch Demo1.txt Demo2.txt
javatpoint@javatpoint-Inspiron-3542:~/Newfolder$ ls
Demo1.txt  Demo2.txt  Demo.txt
```

## 7. cat Command

The **cat** command is a multi-purpose utility in the Linux system. It can be used to create a file, display content of the file, copy the content of one file to another file, and more.

### Syntax:

```
cat [OPTION]... [FILE]..
```

To create a file, execute it as follows:

```
cat > <file name>
// Enter file content
```

Press "**CTRL+ D**" keys to save the file. To display the content of the file, execute it as follows:

```
cat <file name>
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~/Newfolder$ cat > Demo.txt
This is a text file.
javatpoint@javatpoint-Inspiron-3542:~/Newfolder$ cat Demo.txt
This is a text file.
```

## 8. rm Command

The **rm** command is used to remove a file.

### Syntax:

```
rm <file name>
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~/Newfolder$ rm Demo.txt
javatpoint@javatpoint-Inspiron-3542:~/Newfolder$ rm Demo1.txt Demo2.txt
```

## 9. cp Command

The **cp** command is used to copy a file or directory.

### Syntax:

To copy in the same directory:

```
cp <existing file name> <new file name>
```

To copy in a different directory:

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ cp demo.txt demo1.txt
javatpoint@javatpoint-Inspiron-3542:~$ cp demo.txt Documents
```

## 10. mv Command

The **mv** command is used to move a file or a directory from one location to another location.

### Syntax:

```
mv <file name> <directory path>
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ mv demo.txt Directory
```

## 11. rename Command

The **rename** command is used to rename files. It is useful for renaming a large group of files.

### Syntax:

```
rename 's/old-name/new-name/' files
```

For example, to convert all the text files into pdf files, execute the below command.

```
rename 's/\.txt$/\.pdf/' *.txt
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ rename 's/\.txt$/\.pdf/' *.txt
javatpoint@javatpoint-Inspiron-3542:~$ ls
a                Desktop          examples.desktop  Music            Python-3.8.0
Akash            Directory        hello.c           Newfolder        sample
a.out            Documents        hello.i           pico             snap
composer.phar    Downloads        hello.o           Pictures          Templates
demo1.pdf         eclipse          hello.s           project          Test.pdf
Demo.sh           eclipse-installer index.html         Public           Videos
Demo.txt~         eclipse-workspace mail              Python
```

## Linux File Content Commands

### 12. head Command

The **head** command is used to display the content of a file. It displays the first 10 lines of a file.

#### Syntax:

```
head <file name>
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ head Demo.txt
1
2
3
4
5
6
7
8
9
10
```

### 13. tail Command

The **tail** command is similar to the head command. The difference between both commands is that it displays the last ten lines of the file content. It is useful for reading the error message.

#### Syntax:

tail <file name>

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ tail Demo.txt
2
3
4
5
6
7
8
9
10
11
```

## 14. tac Command

The **tac** command is the reverse of cat command, as its name specified. It displays the file content in reverse order (from the last line).

## Syntax:

```
tac <file name>
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ tac Demo.txt
11
10
9
8
```

Free Learning Platform For Better Future

The **more** command is quite similar to the cat command, as it is used to display the file content in the same way that the cat command does. The only difference between both commands is that, in case of larger files, the more command displays screenful output at a time.

In more command, the following keys are used to scroll the page:

**ENTER key:** To scroll down page by line.

**Space bar:** To move to the next page.

**b key:** To move to the previous page.

**/ key:** To search the string.

**Syntax:**

```
more <file name>
```

**Output:**

```
;;; gyp.el - font-lock-mode support for gyp files.

;; Copyright (c) 2012 Google Inc. All rights reserved.
;; Use of this source code is governed by a BSD-style license that can be
;; found in the LICENSE file.

;; Put this somewhere in your load-path and
;; (require 'gyp)

(require 'python)
(require 'cl)

(when (string-match "python-mode.el" (symbol-file 'python-mode 'defun))
  (error (concat "python-mode must be loaded from python.el (bundled with "
                  "recent emacsen), not from the older and less maintained "
                  "python-mode.el")))

(defadvice python-indent-calculate-levels (after gyp-outdent-closing-parens
                                              activate)
  "De-indent closing parens, braces, and brackets in gyp-mode."
  (when (and (eq major-mode 'gyp-mode)
              (string-match "^ *[][]}][[,)]]* *$"
                            (buffer-substring-no-properties
                             (point)
                             (point-max)))))

--More-- (7%)
```

## 16. less Command

The **less** command is similar to the **more** command. It also includes some extra features such as 'adjustment in width and height of the terminal.' Comparatively, the **more** command cuts the output in the width of the terminal.

**Syntax:**

```
less <file name>
```

**Output:**

```

;;; gyp.el - font-lock-mode support for gyp files.

;; Copyright (c) 2012 Google Inc. All rights reserved.
;; Use of this source code is governed by a BSD-style license that can be
;; found in the LICENSE file.

;; Put this somewhere in your load-path and
;; (require 'gyp)

(require 'python)
(require 'cl)

(when (string-match "python-mode.el" (symbol-file 'python-mode 'defun))
  (error (concat "python-mode must be loaded from python.el (bundled with "
                  "recent emacs), not from the older and less maintained "
                  "python-mode.el")))

(defadvice python-indent-calculate-levels (after gyp-outdent-closing-parens
                                             activate)

```

## Linux User Commands

### 17. su Command

The **su** command provides administrative access to another user. In other words, it allows access of the Linux shell to another user.

#### Syntax:

```
su <user name>
```

#### Output:

```

javatpoint@javatpoint-Inspiron-3542:~$ su javatpoint
Password:
javatpoint@javatpoint-Inspiron-3542:~$ █

```

### 18. id Command

The **id** command is used to display the user ID (UID) and group ID (GID).

#### Syntax:

```
id
```

#### Output:

```

javatpoint@javatpoint-Inspiron-3542:~$ id
uid=1000(javatpoint) gid=1000(javatpoint) groups=1000(javatpoint),4(adm),24(cdrom),27(sudo),30(dip),46(plugdev),116(lpadmin),126(sambashare)
javatpoint@javatpoint-Inspiron-3542:~$ █

```

## 19. useradd Command

The `useradd` command is used to add or remove a user on a Linux server.

### Syntax:

```
useradd username
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ sudo useradd JTP
[sudo] password for javatpoint:
javatpoint@javatpoint-Inspiron-3542:~$
```

## 20. passwd Command

The `passwd` command is used to create and change the password for a user.

### Syntax:

```
passwd <username>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ sudo passwd JTP
Enter new UNIX password:
Retype new UNIX password:
passwd: password updated successfully
javatpoint@javatpoint-Inspiron-3542:~$
```

## 21. groupadd Command

The `groupadd` command is used to create a user group.

### Syntax:

```
groupadd <group name>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ sudo groupadd Developer
javatpoint@javatpoint-Inspiron-3542:~$
```

## Linux Filter Commands

### 22. cat Command

The `cat` command is also used as a filter. To filter a file, it is used inside pipes.

### Syntax:

```
cat <fileName> | cat or tac | cat or tac | ...
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ cat Demo.txt | tac | cat | cat | tac
1
2
3
4
5
6
7
8
9
10
11
```

## 23. cut Command

The `cut` command is used to select a specific column of a file. The `-d` option is used as a delimiter, and it can be a space (' '), a slash (/), a hyphen (-), or anything else. And, the `-f` option is used to specify a column number.

### Syntax:

```
cut -d(delimiter) -f(columnNumber) <fileName>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ cat >marks.txt
alex-50
alen-70
jon-75
carry-85
celena-90
justin-80
javatpoint@javatpoint-Inspiron-3542:~$ cut -d- -f2 marks.txt
50
70
75
85
90
80
javatpoint@javatpoint-Inspiron-3542:~$
```

## 24. grep Command

The **grep** is the most powerful and used filter in a Linux system. The 'grep' stands for "**global regular expression print**." It is useful for searching the content from a file. Generally, it is used with the pipe.

### Syntax:

```
command | grep <searchWord>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ cat marks.txt | grep 9  
celena-90
```

## 25. comm Command

The '**comm**' command is used to compare two files or streams. By default, it displays three columns, first displays non-matching items of the first file, second indicates the non-matching item of the second file, and the third column displays the matching items of both files.

### Syntax:

```
comm <file1> <file2>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ comm Demo.txt Demo1.txt  
      1  
2  
      3  
comm: file 2 is not in sorted order  
    11  
      4  
      5  
    22  
    33  
6  
7  
8  
9  
comm: file 1 is not in sorted order  
10  
11
```

## 26. sed command

The **sed** command is also known as **stream editor**. It is used to edit files using regular expression. It does not permanently edit files; instead, the edited content is displayed on the screen.

remains only on display. It does not affect the actual file.

### Syntax:

```
command | sed 's/<oldWord>/<newWord>/'
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ echo class7 | sed 's/class/jtp/'
jtp7
javatpoint@javatpoint-Inspiron-3542:~$ echo class7 | sed 's/7/10/'
class10
```

## 27. tee command

The **tee** command is quite similar to the **cat** command. The only difference between both filters is that it puts standard input on standard output and also write them into a file.

### Syntax:

```
cat <fileName> | tee <newFile> | cat or tac |.....
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ cat marks.txt | tee new.txt | cat
alex-50
alen-70
jon-75
carry-85
celena-90
justin-80
javatpoint@javatpoint-Inspiron-3542:~$ cat new.txt
alex-50
alen-70
jon-75
carry-85
celena-90
justin-80
```

## 28. tr Command

The **tr** command is used to translate the file content like from lower case to upper case.

### Syntax:

```
command | tr <'old'> <'new'>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ cat marks.txt | tr 'prcu' 'PRCU'
alex-50
alen-70
jon-75
CaRRy-85
Celena-90
jUstin-80
```

## 29. uniq Command

The **uniq** command is used to form a sorted list in which every word will occur only once.

### Syntax:

```
command <fileName> | uniq
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ sort marks.txt | uniq
alen-70
alex-50
carry-85
celena-90
jon-75
justin-80
```

## 30. wc Command

The **wc** command is used to count the lines, words, and characters in a file.

### Syntax:

```
wc <file name>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ wc marks.txt
 6  6 52 marks.txt
```

## 31. od Command

The **od** command is used to display the content of a file in different s, such as hexadecimal, octal, and ASCII characters.

## Syntax:

```
od -b <fileName> // Octal format
od -t x1 <fileName> // Hexa decimal format
od -c <fileName> // ASCII character format
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ od -b marks.txt
0000000 141 154 145 170 055 065 060 012 141 154 145 156 055 067 060 012
0000020 152 157 156 055 067 065 012 143 141 162 162 171 055 070 065 012
0000040 143 145 154 145 156 141 055 071 060 012 152 165 163 164 151 156
0000060 055 070 060 012
0000064
javatpoint@javatpoint-Inspiron-3542:~$ od -t x1 marks.txt
0000000 61 6c 65 78 2d 35 30 0a 61 6c 65 6e 2d 37 30 0a
0000020 6a 6f 6e 2d 37 35 0a 63 61 72 72 79 2d 38 35 0a
0000040 63 65 6c 65 6e 61 2d 39 30 0a 6a 75 73 74 69 6e
0000060 2d 38 30 0a
0000064
javatpoint@javatpoint-Inspiron-3542:~$ od -c marks.txt
0000000  a   l   e   x   -   5   0   \n   a   l   e   n   -   7   0   \n
0000020  j   o   n   -   7   5   \n   c   a   r   r   y   -   8   5   \n
0000040  c   e   l   e   n   a   -   9   0   \n   j   u   s   t   i   n
0000060  -   8   0   \n
0000064
```

## 32. sort Command

The **sort** command is used to sort files in alphabetical order.

## Syntax:

```
sort <file name>
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ sort marks.txt
alen-70
alex-50
carry-85
celena-90
jon-75
justin-80
```

## 33. gzip Command

The **gzip** command is used to truncate the file size. It is a compressing tool. It replaces the original file by the compressed file having '.gz' extension.

## Syntax:

```
gzip <file1> <file2> <file3>...
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ gzip Demo.txt Demo1.txt
javatpoint@javatpoint-Inspiron-3542:~$ ls
a                Demo.txt.gz      examples.desktop  Music           Python-3.8.0
Akash           Desktop          hello.c           Newfolder       sample
a.out           Directory        hello.i           new.txt         snap
composer.phar   Documents        hello.o           pico            Templates
demo1.pdf       Downloads        hello.s           Pictures         Test.pdf
Demo1.txt.gz    eclipse          index.html        project         Videos
Demo.sh         eclipse-installer mail              Public
Demo.txt~       eclipse-workspace marks.txt         Python
```

## 34. gunzip Command

The **gunzip** command is used to decompress a file. It is a reverse operation of gzip command.

### Syntax:

```
gunzip <file1> <file2> <file3>..
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ gunzip Demo.txt Demo1.txt
javatpoint@javatpoint-Inspiron-3542:~$ ls
a                Demo.txt~        examples.desktop  Music           Python-3.8.0
Akash           Desktop          hello.c           Newfolder       sample
a.out           Directory        hello.i           new.txt         snap
composer.phar   Documents        hello.o           pico            Templates
demo1.pdf       Downloads        hello.s           Pictures         Test.pdf
Demo1.txt       eclipse          index.html        project         Videos
Demo.sh         eclipse-installer mail              Public
Demo.txt        eclipse-workspace marks.txt         Python
```

## Linux Utility Commands

### 35. find Command

The **find** command is used to find a particular file within a directory. It also supports various options to find a file such as byname, by type, by date, and more.

The following symbols are used after the find command:

(.) : For current directory name

(/) : For root

## Syntax:

```
find . -name "*.pdf"
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ find . -name "*.pdf"
./Test.pdf
./Python-3.8.0/Doc/library/turtle-star.pdf
./Akash/Joomla/Original Copy/Brochure-Joomla-2019.pdf
./Akash/Joomla/Original Copy/Joomla-Guide-Final.pdf
./local/share/Trash/files/2400966-250544e72f817db3bcef-1587140240830.pdf
./local/share/Trash/files/2400966-3ad982eaa58c5d43fb53-1585763620407.pdf
find: './.anydesk/incoming': Permission denied
./Downloads/ConfirmationPage_20030070774.pdf
./demo1.pdf
find: './.dbus': Permission denied
find: './.cache/dconf': Permission denied
./Directory/demo.pdf
./Directory/demo2.pdf
./Directory/demo1.pdf
```

## 36. locate Command

The **locate** command is used to search a file by file name. It is quite similar to find command; the difference is that it is a background process. It searches the file in the database, whereas the find command searches in the file system. It is faster than the find command. To find the file with the locates command, keep your database updated.

## Syntax:

```
locate <file name>
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ locate sysctl.conf
/etc/sysctl.conf
/etc/sysctl.d/99-sysctl.conf
/etc/ufw/sysctl.conf
/snap/core/8935/etc/sysctl.conf
/snap/core/8935/etc/sysctl.d/99-sysctl.conf
/snap/core/9066/etc/sysctl.conf
/snap/core/9066/etc/sysctl.d/99-sysctl.conf
/snap/core18/1705/etc/sysctl.d/99-sysctl.conf
/snap/core18/1754/etc/sysctl.d/99-sysctl.conf
/usr/share/doc/procps/examples/sysctl.conf
/usr/share/man/man5/sysctl.conf.5.gz
```

## 37. date Command

The **date** command is used to display date, time, time zone, and more.

### Syntax:

```
date
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ date
Fri May 22 21:51:05 IST 2020
```

## 38. cal Command

The **cal** command is used to display the current month's calendar with the current date highlighted.

### Syntax:

```
cal<
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ cal
    May 2020
Su Mo Tu We Th Fr Sa
                1  2
 3  4  5  6  7  8  9
10 11 12 13 14 15 16
17 18 19 20 21 22 23
24 25 26 27 28 29 30
31
```

## 39. sleep Command

The **sleep** command is used to hold the terminal by the specified amount of time. By default, it takes time in seconds.

### Syntax:

```
sleep <time>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ sleep 4
```

## 40. time Command

The **time** command is used to display the time to execute a command.

### Syntax:

```
time
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ time
real    0m0.000s
user    0m0.000s
sys     0m0.000s
```

## 41. zcat Command

The **zcat** command is used to display the compressed files.

### Syntax:

```
zcat <file name>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ ls
a                Demo.txt.gz      examples.desktop  Music           Python-3.8.0
Akash            Desktop          hello.c           Newfolder      sample
a.out            Directory        hello.i           new.txt        snap
composer.phar    Documents        hello.o           pico           Templates
demo1.pdf        Downloads        hello.s           Pictures        Test.pdf
Demo1.txt        eclipse          index.html        project        Videos
Demo.sh          eclipse-installer mail              Public
Demo.txt~        eclipse-workspace marks.txt         Python
javatpoint@javatpoint-Inspiron-3542:~$ zcat Demo.txt
1
2
3
4
5
6
```

## 42. df Command

The **df** command is used to display the disk space used in the file system. It displays the output as in the number of used blocks, available blocks, and the mounted directory.

### Syntax:

**Output:**

```

javatpoint@javatpoint-Inspiron-3542:~$ df
Filesystem      1K-blocks      Used Available  Use% Mounted on
udev            1931652         0    1931652   0% /dev
tmpfs           393260         1756    391504   1% /run
/dev/sda1       479668904 26471148 428762148   6% /
tmpfs           1966284      243536    1722748  13% /dev/shm
tmpfs            5120           4         5116   1% /run/lock
tmpfs           1966284         0    1966284   0% /sys/fs/cgroup
/dev/loop1      231936      231936         0 100% /snap/wine-platform-runtime/136
/dev/loop2      144128      144128         0 100% /snap/gnome-3-26-1604/98
/dev/loop4        384         384         0 100% /snap/gnome-characters/539
/dev/loop6      220160      220160         0 100% /snap/wine-platform-5-stable/4
/dev/loop5      164096      164096         0 100% /snap/gnome-3-28-1804/116

```

**43. mount Command**

The **mount** command is used to connect an external device file system to the system's file system.

**Syntax:**

```
mount -t type <device> <directory>
```

**Output:**

```

javatpoint@javatpoint-Inspiron-3542:~$ mount
sysfs on /sys type sysfs (rw,nosuid,nodev,noexec,relatime)
proc on /proc type proc (rw,nosuid,nodev,noexec,relatime)
udev on /dev type devtmpfs (rw,nosuid,relatime,size=1931652k,nr_inodes=482913,mode=755)
devpts on /dev/pts type devpts (rw,nosuid,noexec,relatime,gid=5,mode=620,ptmxmode=000)
tmpfs on /run type tmpfs (rw,nosuid,noexec,relatime,size=393260k,mode=755)
/dev/sda1 on / type ext4 (rw,relatime,errors=remount-ro)
securityfs on /sys/kernel/security type securityfs (rw,nosuid,nodev,noexec,relatime)
tmpfs on /dev/shm type tmpfs (rw,nosuid,nodev)

```

**44. exit Command**

Linux **exit** command is used to exit from the current shell. It takes a parameter as a number and exits the shell with a return of status number.

**Syntax:**

```
exit
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ exit
```

After pressing the ENTER key, it will exit the terminal.

## 45. clear Command

Linux **clear** command is used to clear the terminal screen.

## Syntax:

```
clear
```

## Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ ls
a                Demo.txt.gz      examples.desktop  Music           Python-3.8.0
Akash            Desktop          hello.c           Newfolder      sample
a.out            Directory        hello.i           new.txt        snap
composer.phar    Documents        hello.o           pico           Templates
demo1.pdf         Downloads        hello.s           Pictures        Test.pdf
Demo1.txt         eclipse          index.html        project        Videos
Demo.sh           eclipse-installer mail              Public
Demo.txt~         eclipse-workspace marks.txt         Python
javatpoint@javatpoint-Inspiron-3542:~$ clear
```

After pressing the ENTER key, it will clear the terminal screen.

# Linux Networking Commands

## 46. ip Command

Linux **ip** command is an updated version of the **ipconfig** command. It is used to assign an IP address, initialize an interface, disable an interface.

## Syntax:

```
ip a or ip addr
```

## Output:

```

javatpoint@javatpoint-Inspiron-3542:~$ ip a
1: lo: <LOOPBACK,UP,LOWER_UP> mtu 65536 qdisc noqueue state UNKNOWN group default qlen 1000
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
    inet 127.0.0.1/8 scope host lo
        valid_lft forever preferred_lft forever
    inet6 ::1/128 scope host
        valid_lft forever preferred_lft forever
2: enp7s0: <NO-CARRIER,BROADCAST,MULTICAST,UP> mtu 1500 qdisc fq_codel state DOWN group default qlen 1000
    link/ether 74:e6:e2:02:93:b8 brd ff:ff:ff:ff:ff:ff
3: wlp6s0: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc noqueue state UP group default qlen 1000
    link/ether 00:71:cc:00:e2:89 brd ff:ff:ff:ff:ff:ff
    inet 192.168.43.240/24 brd 192.168.43.255 scope global dynamic noprefixroute wlp6s0
        valid_lft 2296sec preferred_lft 2296sec
    inet6 fe80::8c59:e84e:1670:27cc/64 scope link noprefixroute
        valid_lft forever preferred_lft forever

```

## 47. ssh Command

Linux **ssh** command is used to create a remote connection through the ssh protocol.

### Syntax:

```
ssh user_name@host(IP/Domain_name)
```

## 48. mail Command

The **mail** command is used to send emails from the command line.

### Syntax:

```
mail -s "Subject" <recipient address>
```

### Output:

```

javatpoint@javatpoint-Inspiron-3542:~$ mail -s "Hello World" Himanshudubey481@gmail.com
Cc:
Hello There
Hope you are doing well.

```

## 49. ping Command

The **ping** command is used to check the connectivity between two nodes, that is whether the server is connected. It is a short form of "Packet Internet Groper."

### Syntax:

ping <destination>

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ ping javatpoint.com
PING javatpoint.com (194.169.80.121) 56(84) bytes of data.
64 bytes from www.javatpoint.com (194.169.80.121): icmp_seq=1 ttl=48 time=3889 ms
64 bytes from www.javatpoint.com (194.169.80.121): icmp_seq=2 ttl=48 time=3043 ms
64 bytes from www.javatpoint.com (194.169.80.121): icmp_seq=3 ttl=48 time=2136 ms
64 bytes from www.javatpoint.com (194.169.80.121): icmp_seq=4 ttl=48 time=1122 ms
```

### 50. host Command

The **host** command is used to display the IP address for a given domain name and vice versa. It performs the DNS lookups for the DNS Query.

### Syntax:

```
host <domain name> or <ip address>
```

### Output:

```
javatpoint@javatpoint-Inspiron-3542:~$ host javatpoint.com
javatpoint.com has address 194.169.80.121
```
